

# Ensure your organization's critical infrastructure is secure with DDoS Protection Service (DPS) from Q9

Distributed denial-of-service (DDoS) attacks are a reality that all organizations face sooner or later. DDoS attacks continue to grow in frequency and severity. Globally, there are currently 60,000 confirmed and expected attacks per week and Canada ranks as the third most frequent botnet attack target. DDoS events target and saturate the available resources of their intended victim usually causing very slow response times or a complete shutdown in service.

Q9's DPS service combats volumetric attacks using industry leading technology operated and supported by Q9's highly skilled NOC personnel, ensuring 7x24 protection. One service provides protection across multiple upstream providers and unlimited IP addresses assigned to Q9's bandwidth service.

SERVICE OPTIONS	FEATURES
<ul style="list-style-type: none"> <li>• Multiple tier options, providing protection against attacks up to 3 or 10Gbps</li> <li>• Multiple attack mitigation options: automatic or customer authorized</li> </ul>	<ul style="list-style-type: none"> <li>• Integration with your company's emergency procedures</li> <li>• Ongoing 7x24 traffic analysis, event monitoring, attack detection, incident management, post attack reports and IP re-assignments</li> </ul>
